## In the Claims

1. (Currently Amended) A polyamide film comprising a structural unit represented by the following chemical formula (I), (II) or (III) and satisfying the following equations (1) to (2) when molar fractions of structural units represented by the following chemical formulae (I), (II) and (III) are referred to as "l", "m" and "n", respectively:
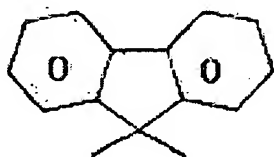

$$l+m+n=100 \qquad (1)$$

$$0 \leqq l, m, n \leqq 100 \qquad (2)$$

chemical formula (I):

$$\cdots \cdots \cdots (I)$$

R^1: fluorene, represented by the following formula:

,

R^2: phenyl, substituted phenyl or biphenyl, represented by the following formulae:

where R^{18}: independently respectively, H, D (deuterium), halogen, aromatic group, hydrocarbon having a carbon number of 1 to 5, or halogenated hydrocarbon having a carbon number of 1 to 5,

R^3: H, F, Cl or CH_3, and

R^4: H, F, Cl or CH_3,

chemical formula (II):

$$\cdots\cdots (II)$$

R^5: CF_3,

R^6: CF_3,

R^7: H,

R^8: H, and

R^9: substituted phenyl or biphenyl, represented by the following formulae:

where R^{18}: independently respectively, H, D (deuterium), halogen, aromatic group, hydrocarbon having a carbon number of 1 to 5, or halogenated hydrocarbon having a carbon number of 1 to 5,
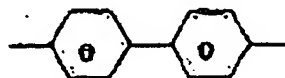

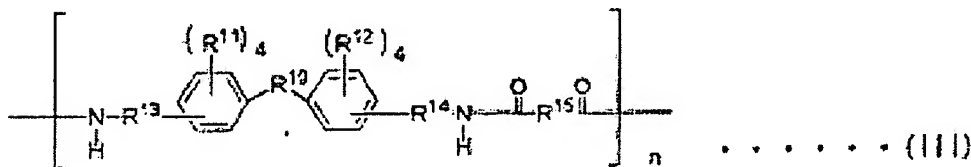

chemical formula (III):

$$\cdots\cdots (III)$$

R^{10}: SO_2,
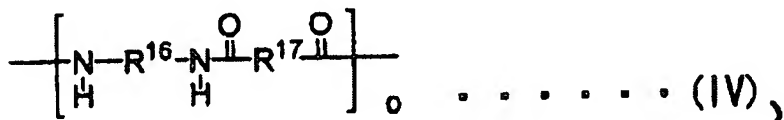

R^{11}: H,

R^{12}: H,

R^{13}: linked directly or a group having a carbon number of 6 to 12 which has at least a phenyl group as an inevitable component,

R^{14}: linked directly or a group having a carbon number of 6 to 12 which has at least a phenyl group as an inevitable component, and

R^{15}: phenyl, substituted phenyl or biphenyl, represented by the following formulae:

where R^{18}: independently respectively, H, D (deuterium), halogen, aromatic group, hydrocarbon having a carbon number of 1 to 5, or halogenated hydrocarbon having a carbon number of 1 to 5

having a Young's modulus in at least one direction of 4 GPa or more, a Tg of 300°C or higher and exhibiting a light transmittance of 80% or more for all lights with wavelengths of from 450 nm to 700 nm and a light transmittance for a light with a wavelength of 400 nm of 75% or more.

2.-9. (Cancelled)

10. (Previously Presented) The polyamide film according to claim 1, comprising a copolymer in an amount of 50 wt% or more.

11. (Original) The polyamide film according to claim 10, wherein a thickness of said film is in a range of 0.01 to 1,000μm.

12.   (Original) The polyamide film according to claim 11, wherein light transmittances of all lights with wavelengths of from 450 nm to 700 nm of said film are 80 % or more, and a thickness of said film is in a range of 1 μm to 100 μm.

13.   (Previously Presented) The polyamide film according to claim 10, wherein a light transmittance for a light with a wavelength of 400 nm of said film is 60 % or more.

14.   (Previously Presented) The polyamide film according to claim 10, wherein a Young's modulus in at least one direction of said film is 8 GPa or more.

15.   (Previously Presented) The polyamide film according to claim 10, wherein a thermal shrinkage in at least one direction of said film at a heat treatment condition of 200°C and 30 minutes is 1 % or less.

16.   (Previously Presented) The polyamide film according to claim 10, wherein a refractive index in at least one direction at a sodium D ray of said film is 1.7 or more.

17.   (Previously Presented) The polyamide film according to claim 10, wherein a retardation of a light with a wavelength of 550 nm of said film is 0 nm or more and less than 10 nm.

18.   (Previously Presented) The polyamide film according to claim 10, wherein a retardation of a light with a wavelength of 550 nm of said film is 10 nm or more and 2,000 nm or less.

19. .   (Previously Presented) The polyamide film according to claim 10, wherein, when a retardation of a light with a wavelength of 550 nm of said film is referred to as R(550) and a retardation of a light with a wavelength of 450 nm of said film is referred to as R (450), said film satisfies R(450)<R(550).

20.   (Previously Presented) The polyamide film according to claim 10, wherein

a birefringence of a light with a wavelength of 550 nm of said film is 0 or more and less than 0.1.

21.   (Previously Presented) The polyamide film according to claim 10, wherein a birefringence of a light with a wavelength of 550 nm of said film is 0.1 or more and less than 0.5.

22.   (Previously Presented) The polyamide film according to claim 10, wherein said polyamide is aromatic.

23.-37. (Cancelled)

38.   (Previously Presented) An optical member comprising the polyamide film according to claim 10.

39.   (Original) The optical member according to claim 38, wherein said member is a substrate for a flat panel display.

40.   (Original) The optical member according to claim 38, wherein said member is a substrate for a solar battery.

41.   (Original) The optical member according to claim 38, wherein said member is an antireflection membrane.

42.   (Original) The optical member according to claim 38, wherein said member is a retardation film.

43.   (Original) The optical member according to claim 38, wherein said member is a touch panel.

44.   (Original) The optical member according to claim 38, wherein said member is an optical fiber.

45.   (Original) The optical member according to claim 38, wherein said member

is an optical waveguide.

46.　(Original) The optical member according to claim 38, wherein said member is a lens.

47.-55. (Cancelled)

56.　(Previously Presented)　An optical member comprising the polyamide film according to claim 1.
